

PRESS RELEASE

ETI's Product Director Chris Beisner to Speak at 2011 FTTH Conference Sept. 29

Open Access Networks presentation is a featured session at the FTTH Conference in Orlando

ATLANTA, GA – September 12, 2011 – Enhanced Telecommunications, Inc. (dba ETI Software Solutions) is proud to announce that Product Director Chris Beisner will be speaking at the FTTH Conference in September in Orlando.

Beisner, a well-known subject matter expert in fiber service activation interfaces, joins the conference as a guest speaker again this year, presenting “The Unique Operational Challenges of Managing an Open Access Network (OAN).” He will discuss the critical differences in the OAN architecture and how those differences impact operations and Operational Support System (‘OSS’) applications.

With over 15 years of experience with billing and OSS applications in the cable, telco, and municipal utility markets, Beisner has a specialization in fiber service activation interfaces. Since joining ETI in 2004, he has been very involved with all aspects of ETI's Fiber-to-the-Home (‘FTTH’) and DSL interface products serving in several capacities including product manager, project manager and director of ETI's technical services division. These different roles have allowed him to develop keen insights into the challenges associated with deploying an FTTH network. Beisner was employed by CSG Systems before joining ETI.

Beisner will be speaking on Thursday, September 29 at 5:15 pm at The 2011 FTTH Conference, held at the Swan and Dolphin Resort in Orlando, FL. The track number is T-604-G.
